

FIXED SNOW PUSHER

The GRYB snow pusher is a conventional fixed-blade model designed for contractors and municipal operations clearing large surfaces. Its rugged construction takes on repeated use and harsh winter conditions, season after season. Built to last, it relies on proven components and simple maintenance that reduce downtime. Versatile, it adapts to parking lots, industrial yards and access roads, whatever the job site.

Redesigned back-drag blade pulls snow as close as possible to buildings and garage doors.

Heavy-duty snow pusher with wear parts and a bolt-on option for quick, easy maintenance.

Better side containment of snow when back-dragging, for precise clearing.

Modified inner side reinforcements prevent snow from packing inside the pusher.
